

High School Academic Program Outline:

Your child will confidently prepare for college and beyond with our Grade 9-12 program.

High school students, supported by our expert tutors, apply foundational skills from earlier education to advanced and specialized subjects like AP classes, physics, and calculus. Our instructors help your child enhance academic and life skills, preparing them for the future by challenging them to analyze complex information, synthesize multiple sources, and develop efficient problem-solving strategies.

Our instructors prioritize your child's well-being both inside and outside of school, helping them effectively manage their responsibilities amidst the demands of high school.
