

Middle School Academic Program Outline:

Grade 6-8 – Strengthen essential academic and life skills for high school.

The middle school years are critical biologically and academically. Your children are going through changes and need opportunities to strengthen fundamental skills that will help them make the transition to middle school. Children Come Click will help your child make the transition.

Our tutors teach students to balance classes, activities, and commitments through effective time management and goal setting for smarter work, not just work harder. Your child will acquire analytical thinking and information assimilation skills as they read from books across various genres and sources.

Our writing programs will help them enjoy writing and hone their writing skills by using the writing process and higher-order thinking questions to challenge them to answer the “why” and “how”.

Our math program encourages your child to tackle complex problems and grasp diverse problem-solving methods. Our instructors can create a tailored plan for success on standardized exams like SSAT and Iowa Algebra Aptitude Test (IAAT) and others. These types of testing become more crucial for middle school students on advanced math tracks or applying to secondary schools that require these exams.
